VentureOS

AI-native multi-agent venture operating system.

Turn raw ideas into validated, build-ready ventures with agent swarms.

02

PROBLEM

Teams start building before they have evidence.

70%

of products launched fail to find product-market fit.

6x

cheaper to invalidate an idea than to ship the wrong one.

- Ideas are easy. Validated execution is hard.
- Founders and PMs juggle interviews, competitors, assumptions and roadmaps in disconnected docs.
- Customer discovery, research, planning and architecture each live in different tools, in different formats, on different days.
- Result: weak or under-validated ideas consume real engineering effort. Strong ideas wait.

"There is nothing so useless as doing efficiently that which should not be done at all." — Peter Drucker

03

SOLUTION

VentureOS gives every idea an agent swarm.

A single product surface that orchestrates specialized AI agents across the venture lifecycle. Every step produces a typed, versioned artifact the next agent reads.

PersonaLab

AGENT GROUP 01

Synthetic customers simulate buyer behaviour, pains, jobs-to-be-done and decision drivers.

Buying Committee

AGENT GROUP 02

Multi-persona agents debate, challenge assumptions, and converge on a recommendation.

Research Graph

AGENT GROUP 03

Graph agents structure problems, evidence, competitors and contradictions.

VentureLab

AGENT GROUP 04

Scores readiness and recommends Proceed / Pivot / Kill with provenance and rationale.

BuildSquad

AGENT GROUP 05

Converts validation into PRD, architecture, roadmap, user stories and risks.

Evaluation

AGENT GROUP 06

Generates readiness reports with confidence, evidence coverage and next steps.

04

AGENT SWARM ARCHITECTURE

One idea in. An execution-ready venture out.

05

DEMO SCENARIO

Faceless CRM for SMB.

A small-business CRM idea is pressure-tested end-to-end through synthetic SMB personas, a buying-committee debate, evidence mapping, validation scoring, build planning and evaluation — all from one zero-key demo link.

agent-swarm steps

97

readiness score / 100

14

GitHub-ready files

Zero-key. No sign-in. No API keys. No GitHub PAT. Real Mode adds BYOK + per-user workspaces via Google sign-in.

Live screens from the deployed app.

Homepage · agent swarm hero + pipeline

Faceless CRM · readiness 97/100, 6-stage progress

PersonaLab · 5 synthetic SMB personas

Buying Committee · agentic deliberation

EvaluationReport.md · provenance + rationale

GitHub Export · 14-file repo scaffold

07

TECHNICAL ARCHITECTURE

Production-minded, alpha-honest.

Stack

PLATFORM

- Next.js 14 (app router) web app · Vercel-deployed
- Supabase: Postgres + Auth (Google OAuth, email allowlist)
- BYOK provider layer: OpenAI · Anthropic · Gemini · Azure OpenAI
- GitHub export via Octokit BYOK token, classified error codes
- Encrypted credentials at rest (server-side AES-GCM)
- pnpm + turbo monorepo · contracts-first architecture

Engineering controls

GUARDRAILS

- VentureJob async execution primitive · timeline + provenance
- Typed contracts in @ventureos/contracts package
- lint:arch import-boundary checks — SDKs only in approved packages
- Sanitized API errors — no provider-keys or stack traces leak
- 72 web tests · vitest · static-source contract tests on UI
- Demo Mode is fully sandboxed: seeded data, never calls a provider

16

pnpm workspace packages

08

AI INTEGRATION

Multi-agent, BYOK, no provider lock-in.

OpenAI**Anthropic****Google Gemini****Azure OpenAI**

Synthetic personas

AGENT KIND 01

TinyTroupe-style multi-persona simulation. Pain, JTBD and decision drivers are first-class fields, debated in a buying committee.

Research graph

AGENT KIND 02

Graphify-inspired workflow that maps problems, assumptions, competitors and contradictions into a navigable graph.

Build + Evaluation

AGENT KIND 03

BuildSquad planners convert validation into PRD / architecture / roadmap / stories. Evaluation renders a versioned report.

Model + provider metadata

AGENT KIND 04

Every artifact records model id, provider, tokens and cost so judges can audit "who said what".

BYOK isolation

AGENT KIND 05

Provider keys never leave the server. Encrypted at rest. Never logged. Never sent to the browser.

Honest scope

AGENT KIND 06

Adapters are scaffolded; the full Python runtime parity for TinyTroupe / Graphify is a roadmap item.

09

IMPACT

For anyone deciding what to build next.

Founders

Pressure-test a pitch before writing a line of code. Get a Proceed / Pivot / Kill in minutes, not weeks.

Product teams

Replace scattered docs with one versioned, agent-generated artifact pack tied to a single Venture object.

Venture studios

Standardize discovery, validation and planning across many bets. Compare confidence across the portfolio.

Hackathon builders

Zero-key Demo Mode runs end-to-end. Real Mode ships GitHub-ready scaffolding with one BYOK token.

<10m

idea → readiness score in a single run

14

GitHub-ready artifacts per export

100%

BYOK · keys stay on the server, never logged

T H A N K Y O U

Decide what to build, *before you build it.*

AI-native multi-agent venture operating system. Built for the Agent Swarms track.
